

Research Sources

Assessment and PYQ-pattern sources

1. [CoCubes corporate assessment overview](#) — official company material; supports that CoCubes combines aptitude, technical and programming assessments and is employer-configurable.
2. [CoCubes public sample questions PDF](#) — public CoCubes-branded sample; used only for style/topics such as loop tracing, modulo, conditionals, swaps and recursion.
3. [Public archived CoCubes CS-domain question page](#) — historical/question-report source; used for topic patterns such as page faults, subnetting, hamming distance and DBMS schedules.
4. [HSBC CoCubes candidate experience, 2025](#) — candidate report; used for coding-theme evidence only, not as a universal pattern.
5. [Google TSS CoCubes candidate experience](#) — candidate report; used for reported networking/DSA/DBMS topic patterns only.
6. [Aon: Prepare for your online assessment](#) — official descriptions of working-memory, complex-planning, deductive-reasoning and numeracy game families.
7. [ISTQB CTFL v4.0](#) — official foundation reference for testing concepts, levels, techniques, defect management and test tools.

How sources were used

The notes paraphrase and synthesise source findings. The original practice questions and mocks in this vault were written from scratch. Source materials are not copied as a replacement for their original sites.
